SECTION C

INDEX TO VOLUME 26

Authors

Andreae, W. A.—The isolation of a blue fluorescent compound, scopoletin, from Green Mountain potato tubers, infected with leaf roll virus, 31.

Arnason, T. J., Cumming, E., and Spinks, J. W. T.—Chromosome breakage induced by absorbed radioactive phosphorus, P^{32}, 109.
See Spinks, J. W. T.

Baird, E. A. and Howatt, J. L.—Ascorbic acid in potatoes grown in New Brunswick, 433.

Bannan, M. W.—Tetraploid Taraxacum kok-saghyz. IV. Comparison of second generation families, 115.

Brown, A. M.—A homothallic, short-cycle strain of Uromyces Polygoni (Pers.) Fuckel, 140.

Burton, M. O., Campbell, J. J. R., and Eagles, B. A.—The mineral requirements for pyocyanin production, 15.

Cain, R. F. and Groves, J. W.—Notes on seed-borne fungi. VI. Sordaria, 486.

Campbell, A. B.—See Peterson, R. F.

Campbell, J. J. R.—See Burton, M. O.; King, J. V.

Clendenning, K. A.—Growth studies of normal and parthenocarpic tomato fruits, 507.

Cormack, M. W.—Winter crown rot or snow mold of alfalfa, clovers, and grasses in Alberta. I. Occurrence, parasitism, and spread of the pathogen, 71.

Cormack, R. G. H.—A substance in the intercellular spaces of white mustard roots that reduces alkaline silver, 263.

Corns, W. G.—Translocation of 2,4-D in injected flowering perennial sow thistle plants, 239.

Cumming, E.—See Arnason, T. J.; Spinks, J. W. T.

Currie, B. W.—The vegetative and frost-free seasons of the Prairie Provinces and the Northwest Territories, 1.

Eagles, B. A.—See Burton, M. O.; King, J. V.

Eiser, H. M. and McFarlane, W. D.—Studies on the metabolism of Streptomyces griseus in relation to the production of streptomycin, 164.

Garrard, E. H.—Fasciation of sweet peas, 158.

Groves, J. W.—See Cain, R. F.; Skolko, A. J.

Hannah, A. E.—See Peterson, R. F.

Hedlin, R. A. and Newton, J. D.—Some factors influencing the growth and survival of rhizobia in humus and soil cultures, 174.

Howatt, J. L.—See Baird, E. A.

Hunter, L. M.—A study of the mycelium and haustoria of the rusts of Abies, 219.

Irwin, R. L. B.—See Spinks, J. W. T.

Jackson, H. S.—Studies of Canadian Thelephoraceae. I. Some new species of Peniophora, 128. II. Some new species of Corticium, 143.

James, N. and Smith, K. N.—Studies on the microflora of flour, 479.

King, J. V., Campbell, J. J. R., and Eagles, B. A.—The mineral requirements for fluorescin production, 514.

Landerkin, G. B. and Lochhead, A. G.—A comparative study of the activity of fifty antibiotic actinomycetes against a variety of soil bacteria, 501.

Langford, A. N.—Autogenous necrosis in tomatoes immune from Cladosporium fulvum Cooke, 35.

Leggatt, C. W.—A contribution to the study of dormancy in seeds. Lactuca sativa L., 194.

Loewy, A.—See Scarth, G. W.

McFarlane, W. D.—See Eiser, H. M.

McGugan, J. M.—Seeds and seedlings of the genus Brassica, 520.

Murray, B. E.—Determining seed size by a volumetric measure, 23.

Newton, J. D.—See Hedlin, R. A.

Newton, M.—See Peturson, B.

Nobles, M. K.—Studies in forest pathology. VI. Identification of cultures of wood-rotting fungi, 281.

Peterson, R. F., Campbell, A. B., and Hannah, A. E.—A diagrammatic scale for estimating rust intensity on leaves and stems of cereals, 496.

Peturson, B., Newton, M., and Whiteside, A. G. O.—Further studies on the effect of leaf rust on the yield, grade, and quality of wheat, 65.

Richardson, E. M.—See Trussell, P. C.

Sanderson, M.—An experiment to measure potential evapotranspiration, 445.

Scarth, G. W., Loewy, A., and Shaw, M.—Use of the infrared total absorption method for estimating the time course of photosynthesis and transpiration, 94.

Shaw, M.—See Scarth, G. W.

Skolko, A. J. and Groves, J. W.—Notes on seed-borne fungi. V. Chaetomium species with dichotomously branched hairs, 269.

Smith, K. N.—See James, N.

Spinks, J. W. T., Cumming, E., Irwin, R. L. B., and Arnason, T. J.—Lethal effect of absorbed radioisotopes on plants, 249.
See Arnason, T. J.

Strugger, S.—Fluorescence microscope examination of bacteria in soil, 188.

Taylor, C. B.—Phosphorus deficiency in relation to the nitrate reduction test. Comment on a paper by Isobel Dimmick, 455.

Trussell, P. C. and Richardson, E. M.—Actinomycin from a new Streptomyces, 27.

Tyner, L. E.—Effect of crop debris, plant roots, and crop sequence on the microbial flora of the soil in relation to root rot in cereal crops, 86.

Waygood, E. R.—Adaptation of the method of Lowry and Lopez to the estimation of inorganic and organic phosphate in plant extracts, 461.

Whiteside, A. G. O.—See Peturson, B.

SECTION C

INDEX TO VOLUME 26

Subjects

Abies, Mycelium and haustoria of rusts of, 219.

Absorption
of infrared, Use of, to estimate time course of photosynthesis and transpiration, 94.
of radioactive phosphorus, Chromosome breakage induced by, 109.
of radioisotopes, Lethal effect of, on plants, 249.

Actinomycete(s), Antibiotic, Activity of, against soil bacteria, 501.

Actinomycin from a new Streptomyces, 27.

Alfalfa, Winter crown rot or snow mold of, in Alberta, 71.

Antibiotic(s), Activity of 50 actinomycetes against soil bacteria, 501.

Ascorbic acid in potatoes grown in New Brunswick, 433.

Bacteria in soil
Activity of antibiotic actinomycetes against, 501.
Fluorescence microscope examination of, 188.

Brassica, Seeds and seedlings of, 520.

Cereal crops, Microbial flora of soil in relation to root rot in, as affected by crop debris, plant roots, and crop sequence, 86.

Cereals, Diagrammatic scale for estimating rust intensity on leaves and stems of, 496.

Chaetomium, Seed-borne species of, with dichotomously branched hairs, 269.

Chromosome breakage induced by absorbed radioactive phosphorus, 109.

Cladosporium fulvum, Necrosis in tomatoes immune from, 35.

Clover(s), Winter crown rot or snow mold of, in Alberta, 71.

Corticium, New species of, 143.

Crop debris, Effect of, on microbial flora of soil in relation to root rot in cereal crops, 86.

Crop sequence, Effect of, on microbial flora of soil in relation to root rot in cereal crops, 86.

Cultures of wood-rotting fungi, Identification of, 281.

2,4-D, Translocation of, in sow thistle, 239.

Dimmick, Isobel, Comment on paper by. Phosphorus deficiency in relation to nitrate reduction test, 455.

Dormancy in seeds of Lactuca sativa, 194.

Evapotranspiration, Potential, Experiment to measure, 445.

Fasciation of sweet peas, 158.

Flour, Microflora of, 479.

Fluorescence microscope examination of bacteria in soil, 188.

Fluorescin production, Mineral requirements for, 514.

Forest pathology, Identification of cultures of wood-rotting fungi, 281.

Fruits of tomato, Normal and parthenocarpic, Growth of, 507.

Fungi
Seed-borne
Chaetomium species with dichotomously branched hairs, 269.
Sordaria, 486.
Wood-rotting, Identification of cultures of, 281.

Grade of wheat, Effect of leaf rust on, 65.

Grass(es), Winter crown rot or snow mold of, in Alberta, 71.

Growth
of normal and parthenocarpic tomato fruits, 507.
of rhizobia in humus and soil cultures, Factors influencing, 174.

Haustoria of rusts of Abies, 219.

Humus, Factors influencing growth and survival of rhizobia in cultures of, 174.

Infrared total absorption method, Use of, to estimate time course of photosynthesis and transpiration, 94.

Intercellular spaces of white mustard roots, Substance in, that reduces alkaline silver, 263.

Isolation of scopoletin from potatoes infected with leaf roll virus, 31.

Láctuca sativa, Dormancy in seeds of, 194.

Leaf roll virus, Isolation of scopoletin from potatoes infected with, 31.

Leaf rust, Effect of, on yield, grade, and quality of wheat, 65.

Leaves of cereals, Diagrammatic scale for estimating rust intensity on, 496.

Lethal effect of absorbed radioisotopes on plants, 249.

Lopez, Adaptation of method of Lowry and, to estimation of phosphate in plant extracts, 461.

Lowry and Lopez, Adaptation of method of, to estimation of phosphate in plant extracts, 461.

Metabolism of Streptomyces griseus in relation to production of streptomycin, 164.

Microbial flora of soil in relation to root rot in cereal crops, as affected by crop debris, plant roots, and crop sequence, 86.

Microflora of flour, 479.

Microscope, Fluorescence, Examination of bacteria in soil by, 188.

Mineral requirements
for fluorescin production, 514.
for pyocyanin production, 15.

Mold, Snow, of alfalfa, clover, and grasses, Occurrence, parasitism and spread of, in Alberta, 71.

Mustard, White, Substance in intercellular spaces of roots of, that reduces alkaline silver, 263.

Mycelium of rusts of Abies, 219.

Necrosis in tomatoes immune from Cladosporium fulvum, 35.

New Brunswick, Ascorbic acid in potatoes grown in, 433.

Nitrate reduction test, Phosphorus deficiency in relation to. Comment on paper by Isobel Dimmick, 455.

Northwest Territories, Vegetative and frost-free seasons of, 1.

Parthenocarpy, Growth of parthenocarpic tomato fruits, 507.

Pathogen(s), Occurrence, parasitism, and spread of winter crown rot or snow mold of alfalfa, clovers, and grasses in Alberta, 71.

Pathology, Forest, Identification of cultures of wood-rotting fungi, 281.

Pea(s), Sweet, Fasciation of, 158.

Peniophora, New species of, 128.

Perennial(s), Translocation of 2,4-D in sow thistle, 239.

Phosphate, Inorganic and organic, in plant extracts, Adaptation of method of Lowry and Lopez to estimation of, 461.

Phosphorus
Deficiency of, in relation to nitrate reduction test. Comment on paper by Isobel Dimmick, 455.
Radioactive, Chromosome breakage induced by absorption of, 109.

Photosynthesis, Use of infrared total absorption method for estimating time course of, 94.

Plant(s)
Extracts of, Adaptation of method of Lowry and Lopez to estimation of phosphate in, 461.
Lethal effect of absorbed radioisotopes on, 249.
Roots of, their effect on microbial flora of soil in relation to root rot of cereal crops, 86.

Potato(es)
Green Mountain, infected with leaf roll virus, Isolation of scopoletin from, 31.
grown in New Brunswick, Ascorbic acid in, 433.

Prairie Provinces, Vegetative and frost-free seasons of, 1.

Pyocyanin production, Mineral requirements for, 15.

Quality of wheat, Effect of leaf rust on, 65.

Radioactive phosphorus, Chromosome breakage induced by, when absorbed, 109.

Radioisotopes, Absorbed, Lethal effect of, on plants, 249.

Rhizobia, Factors influencing growth and survival of, in humus and soil cultures, 174.

Root rot in cereal crops, Microbial flora of soil in relation to, as affected by crop debris, plant roots, and crop sequence, 86.

Root(s)
of plants, Effect of, on microbial flora of soil in relation to root rot of cereal crops, 86.
of white mustard, Substance in intercellular spaces of, that reduces alkaline silver, 263.

Rot
Root rot in cereal crops, Microbial flora of soil in relation to, as affected by crop debris, 86.
Winter crown rot of alfalfa, clovers, and grasses, Occurrence, parasitism, and spread of, in Alberta, 71.

Rust(s)
Diagrammatic scale for estimation of intensity of, on leaves and stems of cereals, 496.
Leaf, Effect of, on yield, grade, and quality of wheat, 65.
of Abies, Mycelium and haustoria of, 219.

Scale, Diagrammatic, for estimating rust intensity on leaves and stems of cereals, 496.

Scopoletin, Isolation of, from potatoes infected with leaf roll virus, 31.

Seasons, Vegetative and frost-free, of Prairie Provinces and Northwest Territories, 1.

Seed-borne fungi
Chaetomium species with dichotomously branched hairs, 269.
Sordaria, 486.

Seedlings of Brassica, 520.

Seeds
of Brassica, 520.
of Lactuca sativa, Dormancy in, 194.
Size of, as determined by volumetric measure, 23.

Silver, Alkaline, Substance in intercellular spaces of white mustard roots that reduces, 263.

Snow mold of alfalfa, clovers, and grasses, Occurrence, parasitism, and spread of, in Alberta, 71.

Soil
Bacteria found in
Activity of antibiotic actinomycetes against, 501.
Fluorescence microscope examination of, 188.
Cultures of, Factors influencing growth and survival of, 174.
Microbial flora of, in relation to root rot in cereal crops, as affected by crop debris, plant roots, and crop sequence, 86.

Sordaria, Species of, borne on seeds, 486.

Sow thistle, Translocation of 2,4-D in, 239.

Stems of cereals, Diagrammatic scale for estimating rust intensity on, 496.

Streptomyces
Actinomycin from a new isolate of, 27.
Streptomycin production as related to metabolism of S. griseus, 164.

Streptomycin, Production of, as related to metabolism of Streptomyces griseus, 164.

Survival of rhizobia in humus and soil cultures, Factors influencing, 174.

Sweet peas, Fasciation of, 158.

Taraxacum kok-saghyz, Tetraploid, Comparison of second generation families of, 115.

Tetraploid(s), Comparison of second generation families of Taraxacum kok-saghyz, 115.

Thelephoraceae
Corticium, New species of, 143.
Peniophora, New species of, 128.

Tomato(es)
Growth of normal and parthenocarpic fruits of, 507.
immune from Cladosporium fulvum, 35.

Translocation of 2,4-D in sow thistle, 239.

Transpiration, Use of infrared total absorption method for estimating time course of, 94.

Tuber(s), Potato, infected with leaf roll virus, Isolation of scopoletin from, 31.

Uromyces Polygoni, Homothallic, Short-cycle strain of, 140.

Virus, Leaf roll, Isolation of scopoletin from potatoes infected with, 31.

Volumetric measure, Determination of seed size by, 23.

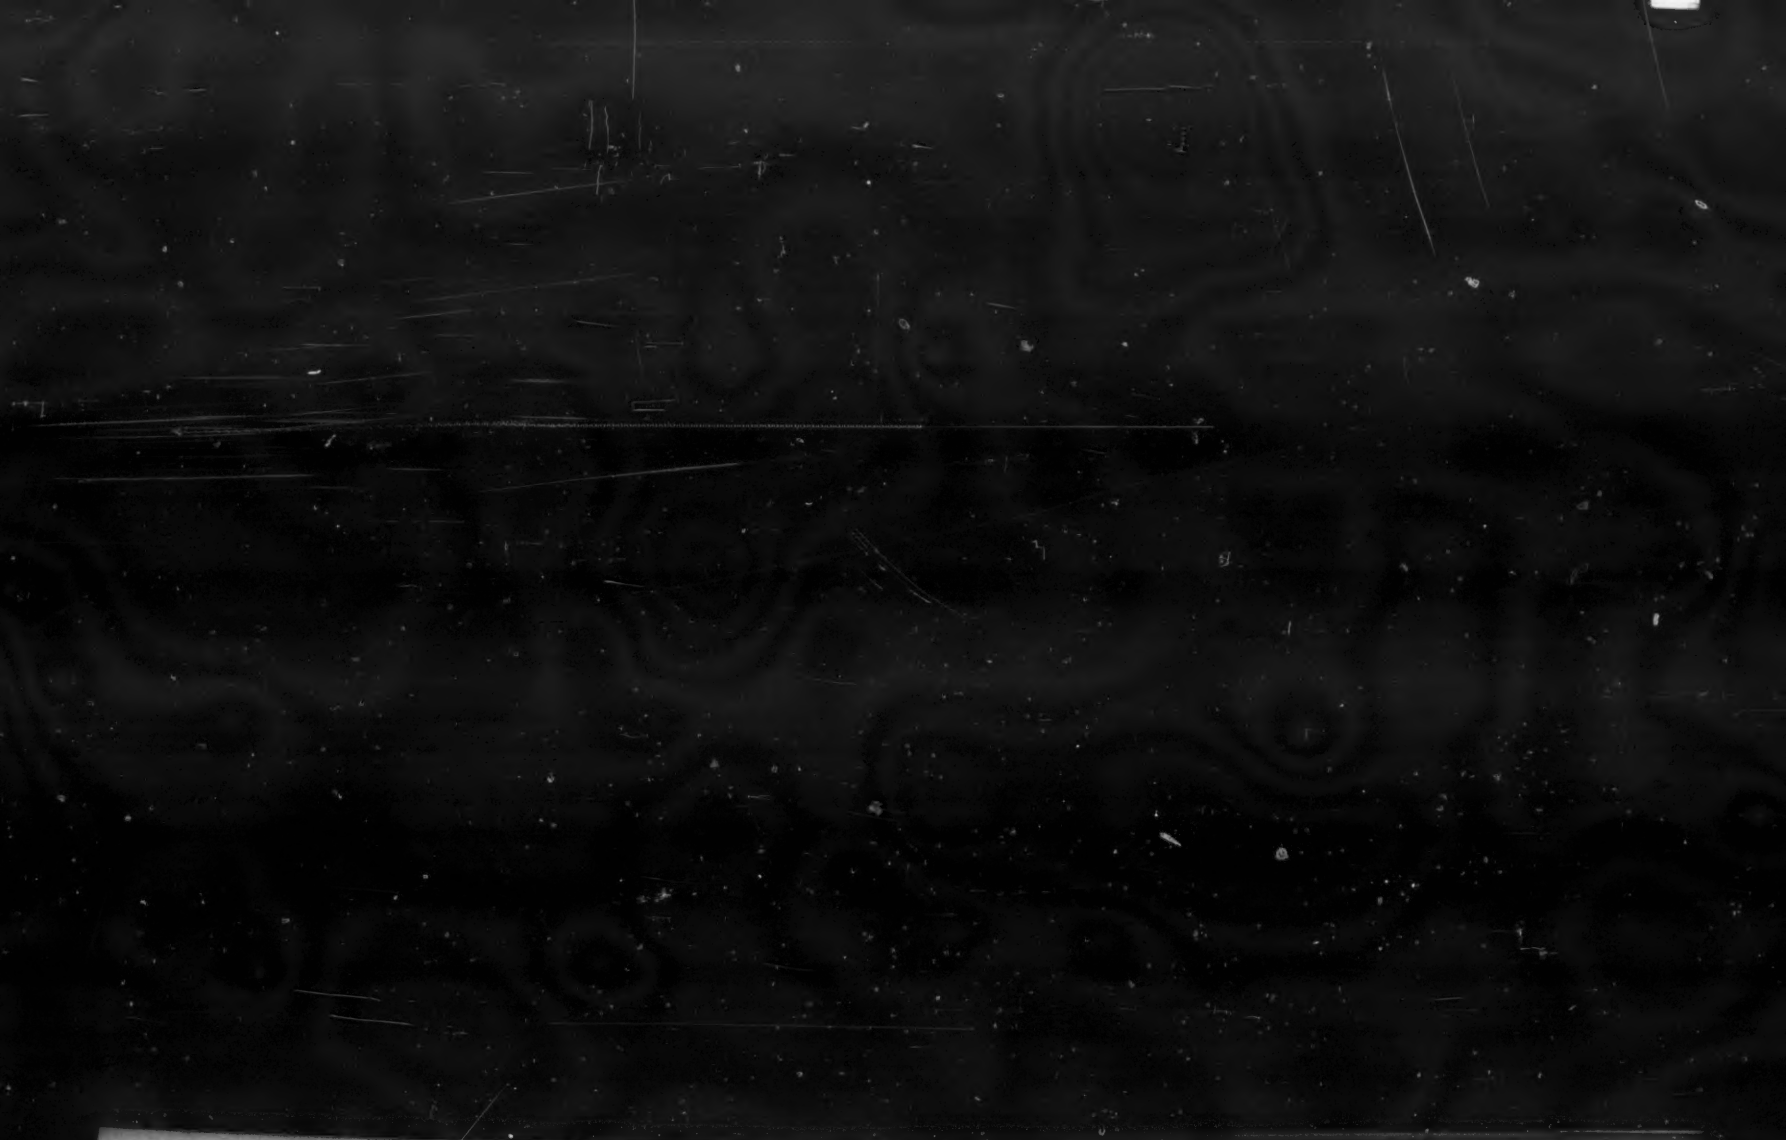
Wheat, Effect of leaf rust on yield, grade, and quality of wheat, 65.

White mustard roots, Substance in intercellular spaces of, that reduces alkaline silver, 263.

Winter crown rot of alfalfa, clovers, and grasses, Occurrence, parasitism, and spread of, in Alberta, 71.

Wood-rotting fungi, Identification of cultures of, 281.

Yield of wheat, Effect of leaf rust on, 65.

ERRATUM


Page 63, line 11. Substitute 2 for 3 (races 1 and 2).
